 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        DB DB

```

The present sequence represents a mouse preptin peptide. The peptide corresponds to Arg69-Leu102 of the profGF-II E peptide. Preptin is secreted by pancreatic islet beta-cells which enhances glucose-mediated insulin secretion. Preptin peptides and their analogues are useful in preparing medicaments for preventing or treating a condition which results in or involves deficient insulin synthesis, secretion or action e.g. type II diabetes. Antibodies specific to preptin peptides are useful in an immunological assay such as radioimmunoassay (RIA), IRMA

(undefined) or Enzyme

linked immunoabsorbant

assay

New mammalian peptide with preptin functionality, useful for preventing or treating Type 2 diabetes mellitus by stimulating insulin secretion.

            The invention relates to a method for treating a disorder mediated by pancreatic islet beta-cells or beta-cell dysfunction by administering preptins (ADM35841-ADM35843), preptin analogues, preptin agonists or salts or derivatives thereof. Preptins are able to stimulate the proliferation and differentiation of beta-cells and fibroblasts. Preptins, preptin analogues, preptin agonists, their salts and derivatives are useful in the treatment of internal or external injuries or wounds (e.g., burns, ulcers, surgical wounds or mucous membrane disruption); conditions characterised by decreased beta-cell mass or number; beta-cell mediated diseases (e.g., type 1 or type 2 diabetes);
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 34
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           quantitatively measuring preptin in a biological fluid preferably in cerebrospinal fluid. Agonists or antagonists of preptin peptides are useful for modulating glucose mediated insulin secretion
                                                                                                                                                                                                                                                          Use of preptins, preptin analogs, preptin agonists, their salts or derivatives, for treating a mediated disease, disorder or condition mediated in whole or in part by beta-cells or beta-cell dysfunction
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              peripheral nervous system injury; Alsheimer's disease;

CC insulin secretion, hyperglycaemia or post-prandial hyperglycaemia. They CC may also be used for treating and/or preventing peripheral nervous system CC injury; Alzheimer's disease; Parkinson's disease; stroke; amyotrophic CC lateral sclerosis; muscular dystrophy; diabetic neuropathy; myocardiopathies such as myocarditis and myocardial infarction; cardiac CC disease and acute attack; and acute renal insufficiency caused by CC ischaemia. They are additionally useful for increasing or maintaining beta-cell mass or beta-cell number; for stimulating beta-cell collected poliferation via cell differentiation or neogenesis; for increasing type CC proliferation via cell differentiation or neogenesis; for decreasing cell CC coll mass via cell differentiation or neogenesis; for decreasing the CC functional recovery of damaged sciatic nerves; preventing peripheral CC myocardial function. The present sequence represents mouse preptin, which CC is specifically claimed for use in the method of the invention.

Use of preptin, preptin analog or preptin agonist for treating a bone condition (e.g. osteoporosis or osteopenia), increasing or maintaining bone density, stimulating osteoblast growth, or modulating osteoblast maintaining osteoblast

Claim 2; SEQ ID NO 1; 29pp; English.

This invention relates to a novel method for treating a bone condition. Specifically, it refers to increasing or maintaining bone density, stimulating osteoblast growth, or modulating osteoblast apoptosis. The present invention comprises administering preptin, a preptin analogue or agonist thereof, which corresponds to residues Asp-69 to Leu-102 of the proinsulin-like growth factor II that is co-secreted with insulin from pancreatic islet beta cells in response to glucose. Accordingly, such compositions that exhibit osteopathic activities can be used to treat or to treat or ę

                       The invention relates to an isolated nucleic acid comprising at least 10 contiguous nucleotides of any of the 233 polynucleotide sequences given in the specification, or its complement. The nucleic acids encode cancerassociated proteins. Also included are an expression vector comprising the isolated nucleic acid cited above, a host cell comprising the above recombinant nucleic acid or expression vector, a microarray for detecting a cancer-associated (CA) nucleic acid comprising at least one probe comprising at least 10 contiguous nucleotides of any of the above mentioned nucleotide sequences, an isolated polypeptide (encoded within an open reading frame of a CA sequence selected from any of the 95 polypucleotide sequences as mentioned in the specification, or its complement), an isolated antibody, (or its antigen binding fragment) that binds to the above polypeptide, a hybridoma that produces the above monoclonal antibody, a pharmaceutical composition comprising the above
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New isolated cancer-associated polynucleotides and polypeptides useful for diagnosing, preventing or treating cancers, especially lymphoma and leukemia, or in screening for agents that modulate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ameliorate diseases including osteoporosis, osteopenia, bone defects or osteogenesis imperfecta, as well as bone loss resulting from primary hyperparathyroidism, endocrine disorders, corticosteroid treatment, autoimmune arthritis or addictive drug use. This peptide sequence is the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     0
```

The present sequence represents a rat preptin peptide. The peptide corresponds to Arg69-Leu102 of the proIGF-II E peptide. Preptin is secreted by pancreatic islet beta-cells which enhances glucose-mediated insulin secretion. Preptin peptides and their analogues are useful in preparing medicaments for preventing or treating a condition which results in or involves deficient insulin synthesis, secretion or action e.g. type II diabetes. Antibodies specific to preptin peptides are useful

useful

The invention relates to a method for treating a disorder mediated by pancreatic islet beta-cells or beta-cell dysfunction by administering preptins (ADM)5841-ADM)5843), preptin analogues, preptin agonists or salts or derivatives thereof. Preptins are able to stimulate the proliferation and differentiation of beta-cells and fibroblasts. Preptins, preptin analogues, preptin agonists, their salts and derivatives are useful in the treatment of internal or external injuries or wounds (e.g., burns, ulcers, surgical wounds or mucous membrane disruption); conditions characterised by decreased beta-cell mass or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (undefined) or Enzyme linked immunoabsorbant assay (BLISA) for quantitatively measuring preptin in a biological fluid preferably cerebrospinal fluid. Agonists or antagonists of preptin peptides a useful for modulating glucose mediated insulin secretion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  peripheral nervous system injury; Alzheimer's disease;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   number; beta-cell mediated diseases (e.g., type 1 or type 2 diabetes);
and conditions characterised by insulin resistance, undesirably low cinsulin secretion, hyperglycaemia or post-prandial hyperglycaemia. They may also be used for treating and/or preventing peripheral nervous system injury; Alzheimer's disease; Parkinson's disease; stroke; amyotrophic lateral sclerosis; muscular dystrophy; diabetic neuropathy; myocardiopathies such as myocarditis and myocardial infarction; cardiac disease and acute attack; and acute renal insufficiency caused by ischaemia. They are additionally useful for increasing or maintaining beta-cell mass or beta-cell number; for stimulating beta-cell proliferation via cell differentiation or neogenesis; for increasing type cell mass via cell differentiation or neogenesis; for decreasing the death of motor neurons; for increasing muscular end plates; promoting the functional recovery of damaged sciatic nerves; preventing peripheral contor paralysis during or as a result of chemotherapy; and for improving myocardial function. The present sequence represents rat preptin, which is specifically claimed for use in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Best Loc

This invention relates to a novel method for treating a bone condition. Specifically, it refers to increasing or maintaining bone density, stimulating osteoblast growth, or modulating osteoblast apoptosis. The present invention comprises administering preptin, a preptin analogue or agonist thereof, which corresponds to residues Asp-69 to Leu-102 of the proinsulin-like growth factor II that is co-secreted with insulin from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        osteoblast growth; osteoblast apoptosis; preptin; proinsulin-like growth factor II; osteopathic; osteoporosis; osteogenesis imperfecta; primary hyperparathyroidism; endocrin corticosteroid treatment; autoimmune arthritis; drug use; rat.
                                                                                                                                                                                                                                                                                                               Use of preptin, preptin analog or preptin agonist for treating a condition (e.g. osteoporosis or osteopenia), increasing or mainta bone density, stimulating osteoblast growth, or modulating osteob
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 34 AA;

                                                                                                                                                       The invention relates to gene sequences (ABI99915-ABI99934) having modified expression in fetal heart tissue as compared to adult heart tissue and the encoded proteins (ABS57375-ABB57392). The genes have cardiant activity and may be useful in the promotion of the repair of damage to heart tissue caused by myocardial necrosis. The gene sequences are useful for screening potential compounds for the ability to influence disease associated with myocardial necrosis. Drugs identified by the screening methods may be used to treat and prevent disease with which myocardial necrosis is associated, such as cardiac hypertrophy and cardiac insufficiency. Diagnosis of diseases such as those above is also disclosed. (Updated on 07-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Genes having differential expression useful for screening potential drugs caused by myocardial necrosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ameliorate diseases including obteoporosis, osteopenia, bone defects or osteogenesis imperfecta, as well as bone loss resulting from primary hyperparathyroidism, endocrine disorders, corticosteroid treatment, autoimmune arthritis or addictive drug use. This peptide sequence is the rat preptin peptide of the invention.
                                                                                                             Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   pancreatic islet beta cells in response to glucose. Accordingly, such compositions that exhibit osteopathic activities can be used to treat ameliorate diseases including osteoporosis, osteopenia, bone defects of the composition of the compos
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          N-PSDB;

The invention discloses a composition comprising two or more isolated rat CC or human polynucleotides or a polynucleotide which represents a fragment, CC derivative or allelic variation of the nucleic acid sequence. Also CC claimed are a vector comprising the nucleic acid sequence cell comprising the vector, a method for identifying a nucleotide sequence kit to perform the method, an array, a method for identifying an agent chat increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal compound which regulates the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal compound that is polynucleotide sequence which is differentially expressed in a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a compound that regulates the activity in an animal of one or more of the opolyneptides given in the composition and a pharmaceutical composition comprising the one or more composition and a pharmaceutical composition comprising the one or more composition to the compound that it is activity is useful for preparing a medicament for treating pain and a pharmaceutical composition comprising the one or more composition in the one or more composition and a pharmaceutical composition comprising the one or more composition in the one or more of the polynucleotide or the compound that composition comprising the one or more composition or the compound that composition are compound that composition are compound that composition are composition or the composition of the printed composition in the construction which is differentially expressed during pain. Note:

The sequence data for this patent did not form part of the printed composition in the construction of the printed construction will be a cons
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     δ

                                                                                                                                                                                      The present sequence represents a human preptin peptide. The peptide corresponds to Arg69-Leu102 of the proIGF-II E peptide. Preptin is secreted by pancreatic islet beta-cells which enhances glucose-mediated insulin secretion. Preptin peptides and their analogues are useful in preparing medicaments for preventing or treating a condition which results in or involves deficient insulin synthesis, secretion or action e.g. type II diabetes. Antibodies specific to preptin peptides are useful in an immunological assay such as radioimmunoassay (RIA), IRMA (undefined) or Enzyme linked immunoabsorbant assay (RIA) for quantitatively measuring preptin in a biological fluid preptin peptides are useful for modulating glucose mediated insulin secretion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Bioactive peptide; preptin; pancreatic islet beta-cell; glucose-mediated insulin secretion; insulin synthesis; type II diabetes; glucose mediated insulin secretion.
                                                                                                                                                                Sequence
                                                                                                                                                                                                                                                                                                                                                                                                     New mammalian peptide with preptin functionality, useful for preventing or treating Type 2 diabetes mellitus by stimulating insulin secretion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  20-APR-2001

CC Preptine, preptin analogues, preptin agonists, their salts and code rivatives are useful in the treatment of internal or external injuries code revoking, preptin analogues, preptin agonists, their salts and code reptine, conditions characterised by decreased beta-cell mass or number; beta-cell mediated diseases (é.g., type 1 or type 2 diabettes); and conditions characterised by insulin resistance, undesirably low consultin secretion, hyperglycaemia or post-prandial hyperglycaemia. They come also be used for treating and/or preventing peripheral nervous system compared to the success of the succes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  peripheral nervous system injury; Alzheimer's disease; parkinson's disease; stroke; amyotrophic lateral sclerosis; muscular dystrophy; diabetic neuropathy; myocardiopathy; myocardial infarction; cardiac disease; acute renal insufficiency; ischaemia, antidiabetic; vulnerary; antidicer; antiinflammatory; gastrointestinal; nootropic; neuroprotective; antiparkinsonian; cerebroprotective; muscular; cardiant; nephrotropic; dermatological;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a method for treating a disorder mediated by pancreatic islet beta-cells or beta-cell dysfunction by administering preptins (ADM35841-ADM35843), preptin analogues, preptin agonists or salts or derivatives thereof. Preptins are able to stimulate the proliferation and differentiation of beta-cells and fibroblasts.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Use of preptins, preptin analogs, preptin agonists, their salts or derivatives, for treating a mediated disease, disorder or condition mediated in whole or in part by beta-cells or beta-cell dysfunction, ulcers or inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; preptin; pancreatic islet beta-cell; fibroblast; proliferation; differentiation; beta-cell disorder; diabetes; insulin resistance; insulin resistance; insulin resistance; insulin resistance; insulin secretion disorder; hyperglycaemia; wound;

                                                                                                                                                                                                                                                                                       This invention relates to a novel method for treating a bone condition. Specifically, it refers to increasing or maintaining bone density, stimulating osteoblast growth, or modulating osteoblast apoptosis. The present invention comprises administering preptin, a preptin analogue or agonist thereof, which corresponds to residues Asp-69 to Leu-102 of the proinsulin-like growth factor II that is co-secreted with insulin from pancreatic islet beta cells in response to glucose. Accordingly, such compositions that exhibit osteopathic activities can be used to treat or ameliorate diseases including osteoporosis, osteopenia, bone defects or osteogenesis imperfecta, as well as bone loss resulting from primary hyperparathyroidism, endocrine disorders, corticosteroid treatment, autoimmune arthritis or addictive drug use. This peptide sequence is the human preptin peptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Use of preptin, preptin analog or preptin agonist for treating a bone condition (e.g. osteoporosis or osteopenia), increasing or maintaining bone density, stimulating osteoblast growth, or modulating osteoblast
                                                                                                                                                                                                                                         Sequence 34
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 osteoblast growth; osteoblast apoptosis; preptin; proinsulin-like growth factor II; osteopathic; osteoporosis; osteopenia; osteogenesis imporfecta; primary hyperparathyroidism; endocrine disorder; corticosteroid treatment; autoimmune arthritis; drug use; human.

                                                                                                                                                The present invention describes a modified therapeutic peptide (I) comprising a therapeutically active amino acid region (III) and a reactive group (II) (e.g. succinimidyl and maleimido groups) attached to a less therapeutically active amino acid region (IV), which covalently bonds with amino/hydroxyl/thiol groups on blood components to form a peptidase stabilised therapeutic peptide composed of 3-50 amino acids. (I) are useful for modifying therapeutic peptides e.g. hormones, growth factors and neurotransmitters, to protect them from peptidase activity in factors and neurotransmitters, to protect them from peptidase activity in composed of 3-50 amino acids. (I) are useful for a drug candidates as they require frequent administration due to rapid degradation by peptidases in the body. Modifying and attaching therapeutic peptides to albumin prevents or reduces the action of peptidases to increase length of activity (half life) and specificity as bonding to large molecules decreases. AAB90829 to AAB92441 represent peptides which can be used in the cycle exemplification of the present invention
                                                                             Query Match

The polynucleotide sequences encoding the Zins3 polypeptides are located on chromosome 12. The present invention also includes antibodies to the Zins3 polypeptides. The Zins3 polypucleotide and polypeptide sequences of the invention are useful for identifying and isolating receptors involved in growth and differentiation of Zins3 responsive cells. This sequence represents human insulin growth factor 2 (IGF2) that shows homology to human Zins3.

                                                                                                                                                                                                                                               cerelates to a pharmaceutical or diagnostic composition comprising one or diagnostically acceptable carriers, excipients and/or auxiliary agents, a method for cleaving a target substrate in vivo or in vitro comprising contacting the target substrate with a protease as cited in the use mentioned, and a method for treatment of a disease in a patient connected with a specific target substrate comprising administering to the patient connected with a specific target substrate and eliminates or reduces one or more biological activities, physico-chemical properties or pharmacological properties of the target protein and/or activates or pharmacological properties of the target protein and/or activates or pharmacological properties of the target protein, and/or adds one or more biological activities, physico-chemical properties or pharmacological properties of the target protein, and/or adds one or more biological activities of the target protein, and/or adds one or pharmacological properties to the target protein. The protease may be administered to treat immune disorders, inflammatory disorders, musculoskeletal diseases, dermatological diseases, gastrointestinal cliseases, endocrine diseases, mourological diseases, memorative diseases, growth disorders, nutritional disorders whis accuracy as proceeding a properties of the pharmacological diseases, mutritional disorders and contract of the pharmacological contents a polycenty decade was a process of the pharmacological diseases.
                                                                                  Matches
                                                                                                                           Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to the use of a protease with defined specificity for a target substrate for preparing a medicament for the treatment of specific disease related to the target substrate. The invention also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Proteases with defined specificity for a target substrate useful iterating a specific disease related to the target substrate, such cancer, asthma, diabetes, inflammatory disorders and psoriasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             18-JUN-2003; 2003EP-00013819.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Score

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         fetal development.
SUBCELLULAR IOCATION: Secreted protein.
DEVELOPMENTAL STAGE: Low levels of expression during myoblast
proliferation. Levels rise rapidly during myoblast differentiation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            GO:0009887;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SIMILARITY: Belongs to the insulin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      and then decrease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  M14951; AAA37683.1; -; mRNA.

"Purification, amino acid sequences and assay cross-reactivities of porcine insulin-like growth factor-I and -II.";

J. Endocrinol. 122:681-687(1989).

J. Endocrinol. 122:681-687(1989).

-I-FUNCTION: The insulin-like growth factors possess growth-promotion activity. In vitro, they are potent mitogens for cultured cells.

IGF-II is influenced by placental lactogen and may play a role insulin-insuline growth factors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        growth
